

## CLEANING GOLF CLUB HEADS

The 421 Polishing Compound is a solid compound. A small amount will go a long way! You may also like to try the 512 fine abrasive buff for cleaning club heads.

### What you'll need:

### Other Supplies:

- Dremel D-Vise

## Step by step direction

---

### Step 1

Though curing that slice is still up to you, you'll strike the ball much more effectively with clean club head surfaces.

### Step 2

Brass brushes are softer than steel, so you'll be able to clean away dirt and oxidation without harming your club heads.

### Step 3

Use brass brushes at low speed. The 535 brush is especially effective for cleaning grooved areas. Recommended speed: 15.000 rpm.

**Step 4**

Restore a like-new shine by following up with the 423 cloth polishing wheel and 421 polishing compound. Recommended speed: 15.000 rpm.
